

Firmware upgrade DS-7604NI-E1/4P/A

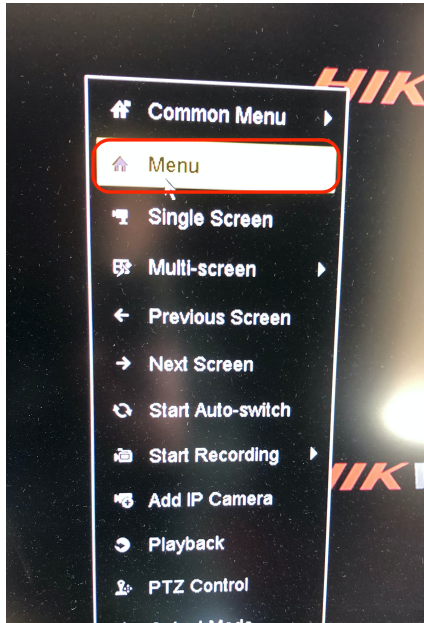

The USBkey may need to be formatted MSDOS FAT32. I think maximum USB Key capacity is 32Gb.

Copy firmware file to USB Key

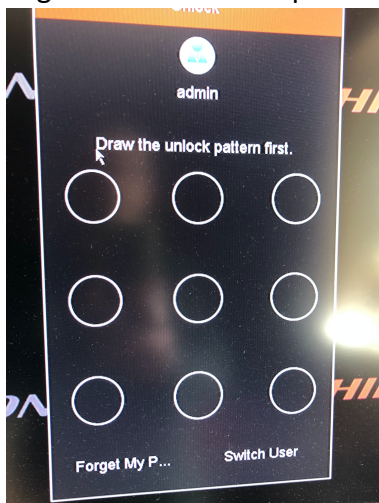

Connect monitor / keyboard to NVR. I think the NVR HDMI port is active by default, not sure about the VGA port.

Insert USB key into NVR

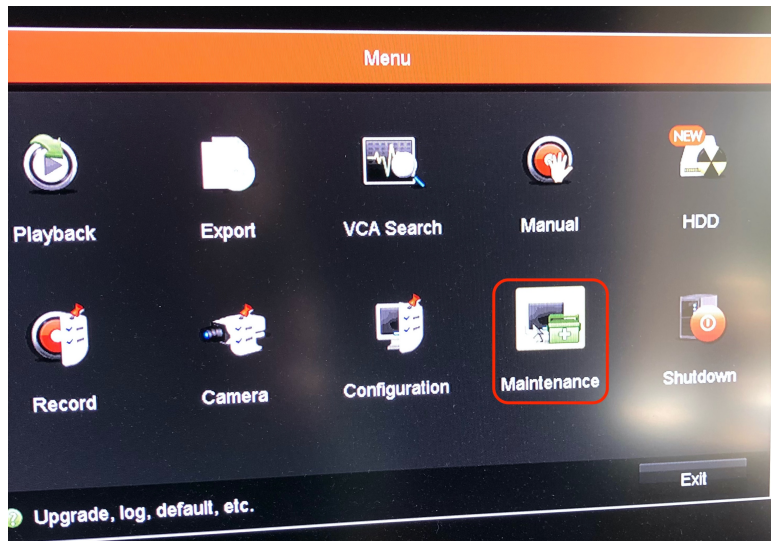

Right click mouse on NVR monitor main screen, left click Menu

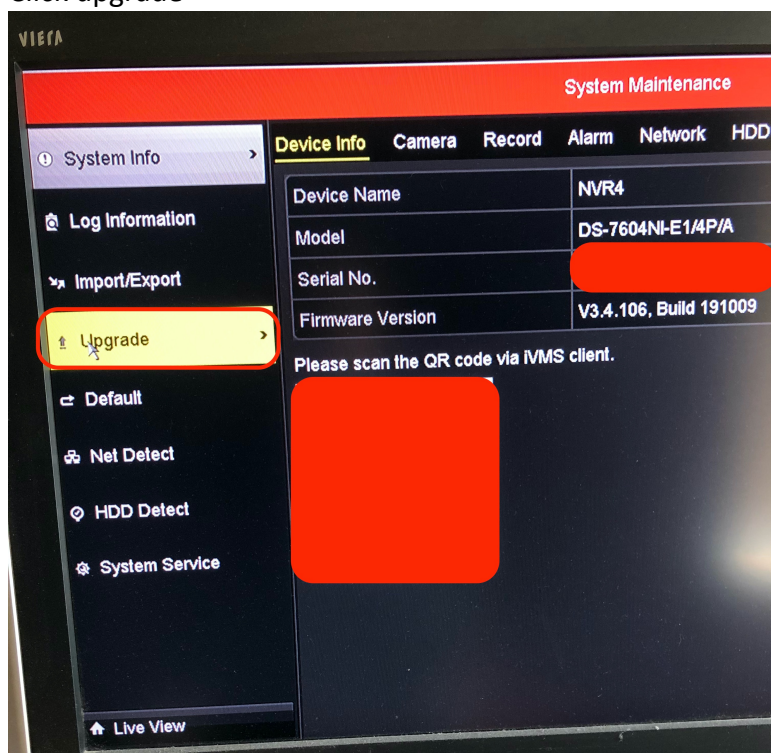

Login as admin. Draw pattern or click switch user and login as admin

Click maintenance

Click upgrade

Click left hand column upgrade

Select firmware file

Click right hand bottom corner upgrade. It will take 5 to 10 minutes NVR will reboot at the end.
