# NEW MILESIGHT NVR INTERFACES
FRESH USER-EXPERIENCE
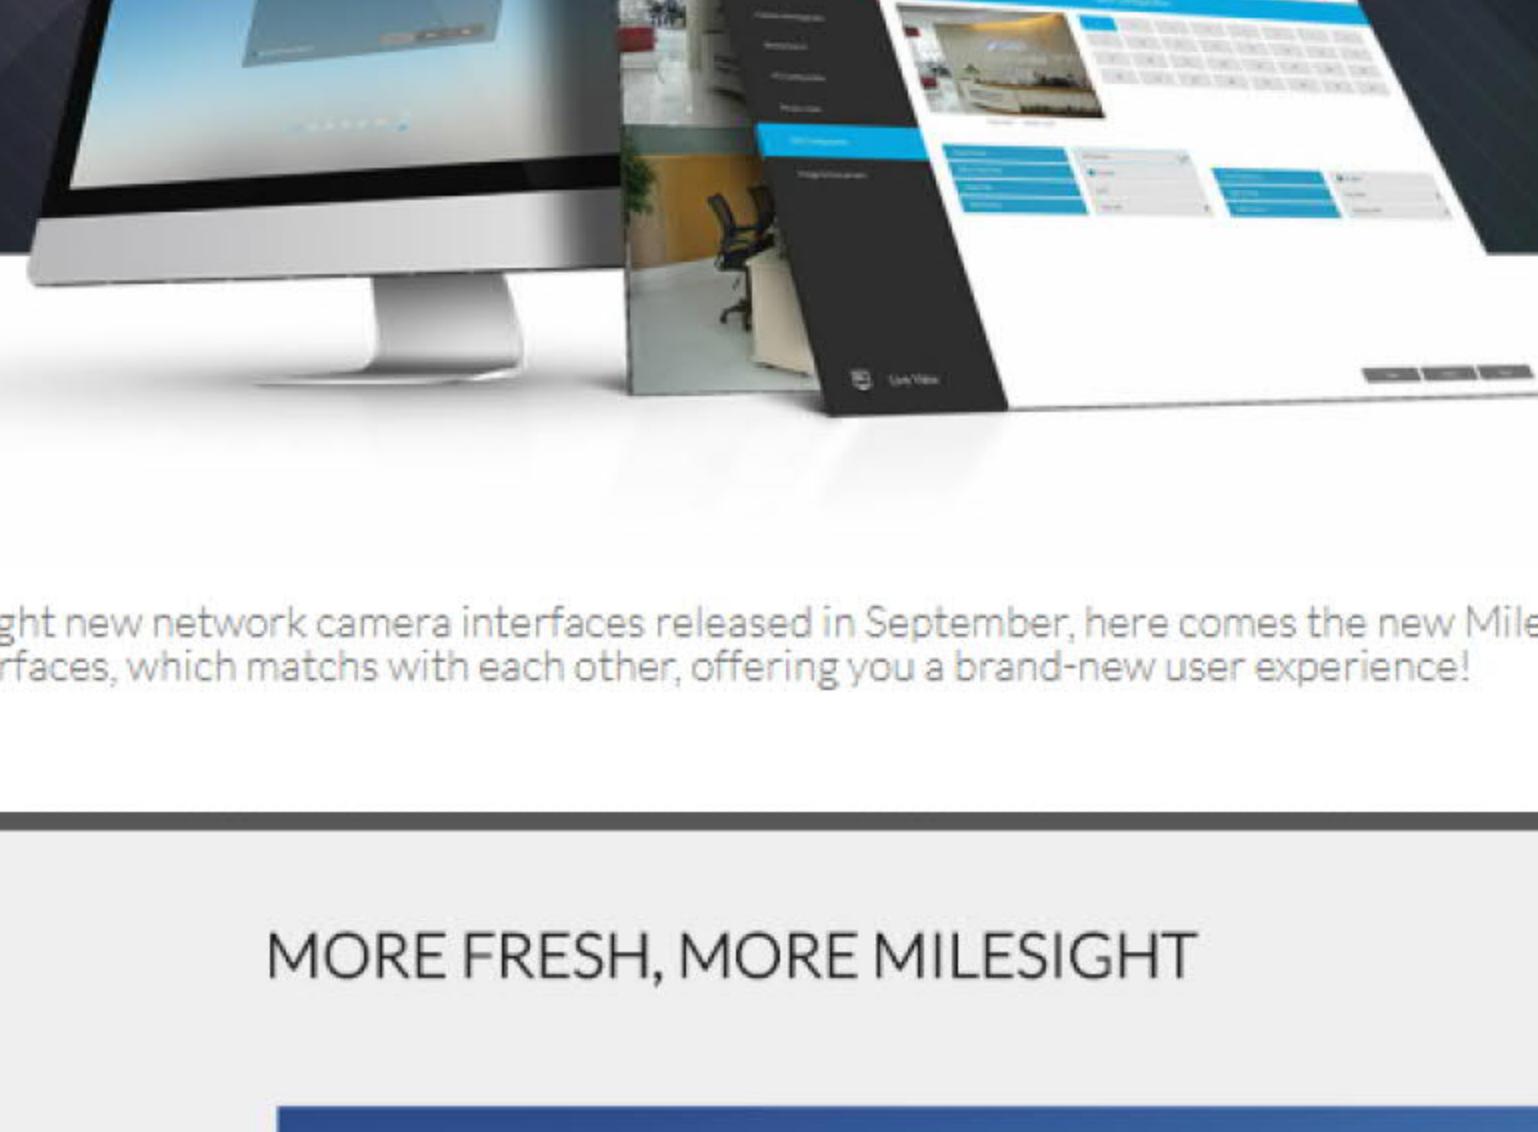

As Milesight new network camera interfaces released in September, here comes the new Milesight NVR interfaces, which matchs with each other, offering you a brand-new user experience!

MORE FRESH, MORE MILESIGHT
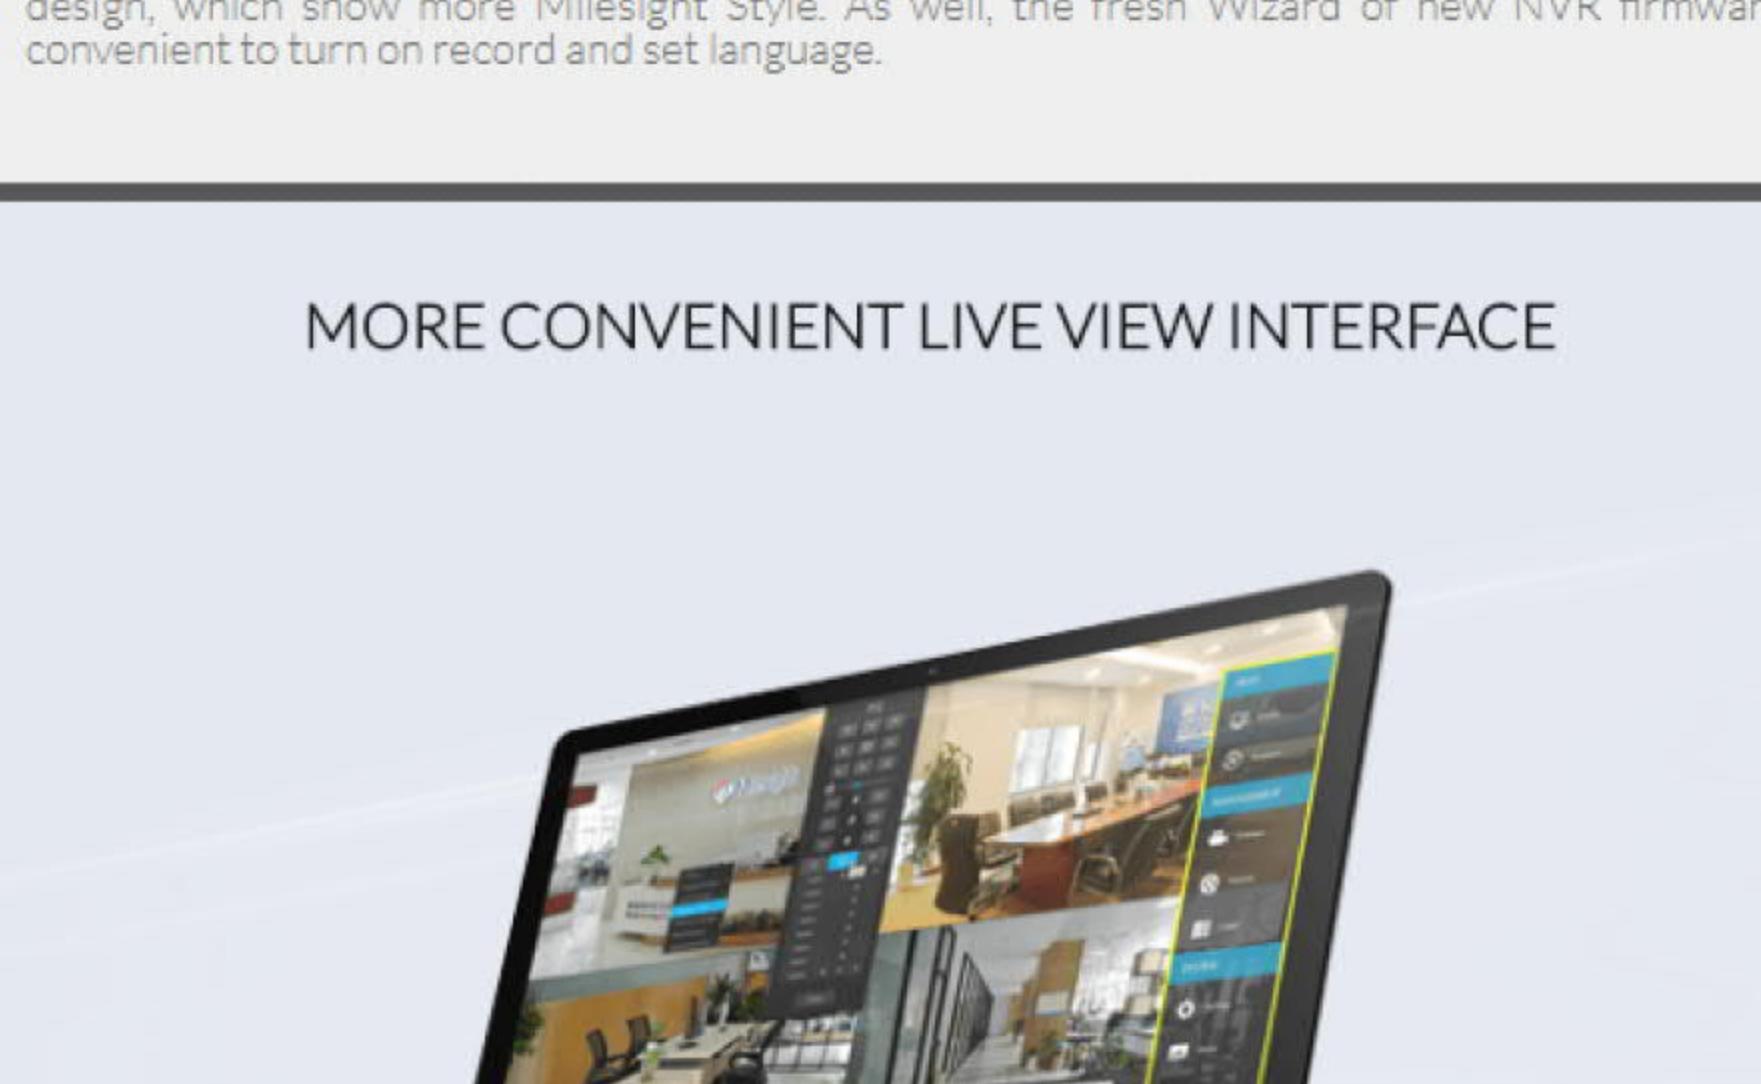

The main color of the new interfaces is simple but Milesight Blue and the new translucent element design, which show more Milesight Style. As well, the fresh Wizard of new NVR firmware is convenient to turn on record and set language.

## MORE CONVENIENT LIVE VIEW INTERFACE

The Main Menu goes to the right side of the interface which can pop up and hide automatically. Tool Bar is added on the bottom just as Display Info is added on the right click. The patrol and pattern of PTZ camera are added to better use of the functionality as well.

QUICKER SETTING SAVE THE TIME

In the Setting of Camera, Milesight new NVR firmware adds Batch IP Modify function with IP Edit as well as Batch Camera Settings. The Record Setting time is also greatly shortened by supporting Batch Settings. As for the Event, Milesight offers one-stop setting. Also, we add Home button on the operating interfaces to quickly switch to other Interfaces.

THE NEW BRING THE MORE
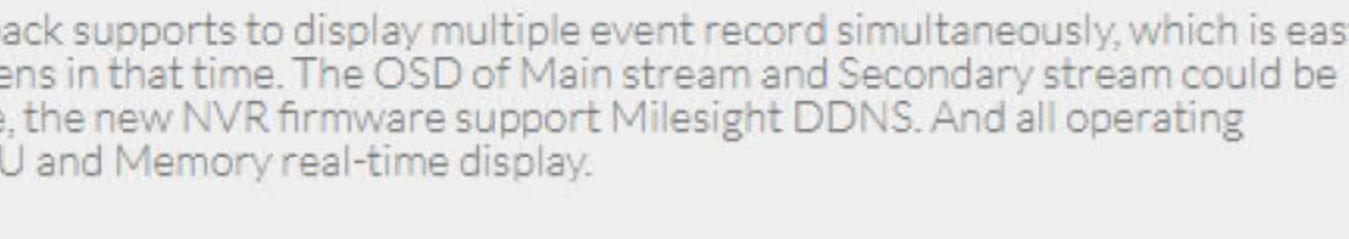

The Schedule and Playback supports to display multiple event record simultaneously, which is easy to check out what happens in that time. The OSD of Main stream and Secondary stream could be set separately. This time, the new NVR firmware support Milesight DDNS. And all operating interfaces can show CPU and Memory real-time display.
