

Security workshop: Zyxel Networks Security Products

We'll be starting in a moment...

Internationally recognised for
Innovation and **design**

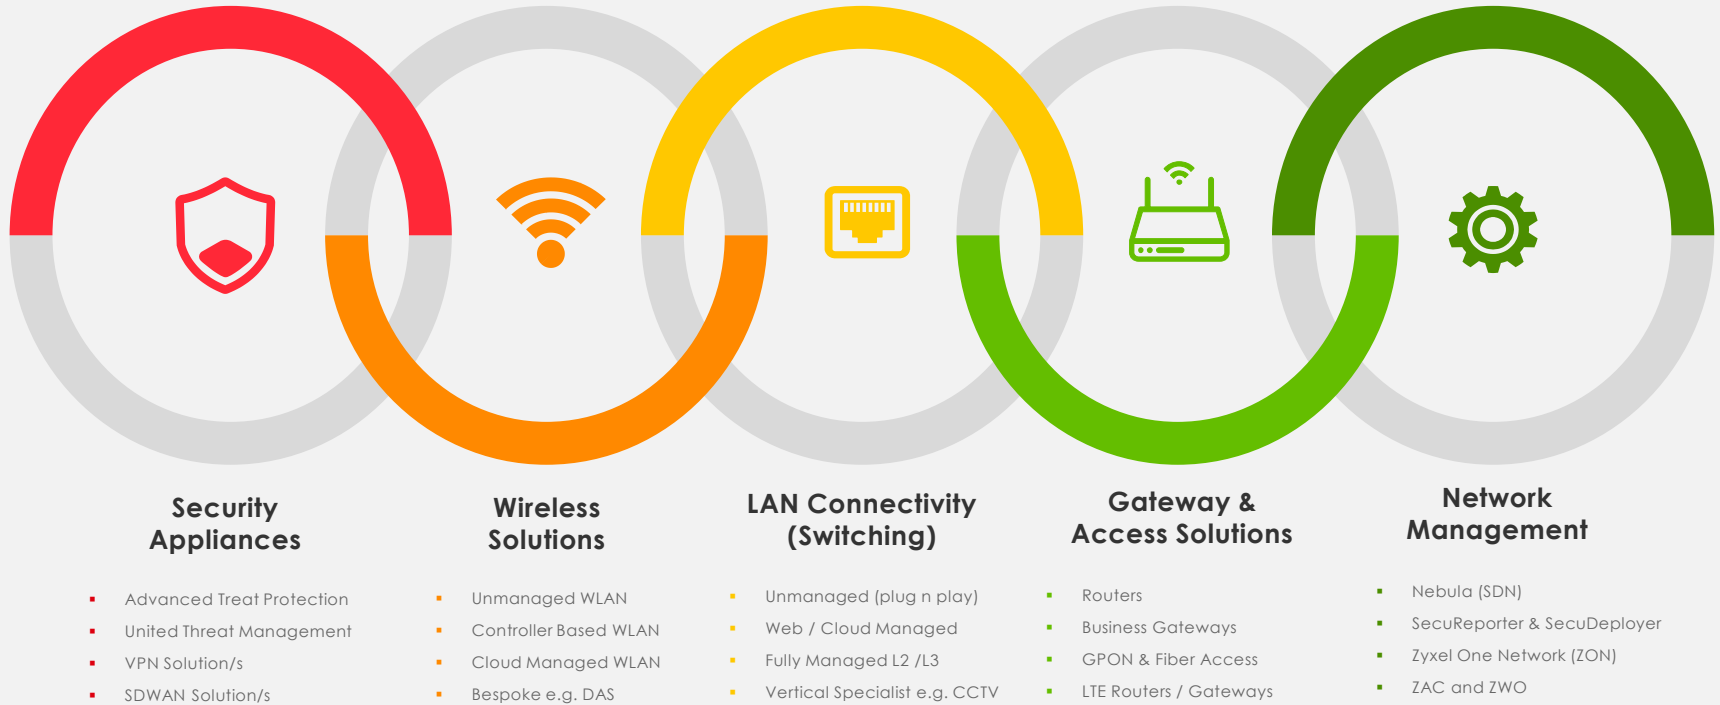

... Just few of our awards:

Highly recommended from Worldwide Media – **Best solution for SMB**

Comprehensive portfolio for end-to-end network delivery

Network **Security**

that packs a **punch**

Speed, efficiency and defence

+ PROTECTING YOUR
BUSINESS NETWORK.

Zyxel is dedicated to creating smarter, more effective protection methods for businesses to protect their networks.

Outstanding Certification by ICSA
Labs continuously for over 20 Years

ICSA Labs (independent division of Verizon) awards recognizes vendors for outstanding achievement in the area of information security certification testing.

Partnering with the leading
Security specialists

Security functionality.

VPN High Availability (HA)

Advanced GRE technology, deploy two IPsec VPN tunnels for active-active VPN load balancing or active-passive failover.

WAN load balancing

Ethernet WAN connections support active-active WAN load balancing or active-passive failover.

Multi-WAN & Mobile Broadband

Provide non-stop Internet uptime with multi-WAN and mobile broadband support.

Virtual Tunnel Interface (VTI)

Virtual Tunnel Interface (VTI) gives you the ability to trunk VPNs together to allow load balancing.

SSL VPN Secure Extender

Secure Extender for Microsoft Windows & Mac computers running macOS are supported.

Support L2TP (over IPSEC)

Easily utilise built-in functions within Microsoft Windows and other supported devices of L2TP to deliver remote "dial in" VPN functions with L2TP with the added security of IPSEC.

"Easy VPN" for ease of use

Zero-configuration remote access to reduce administration and complicated setup challenges.

Robust & Secure SHA2 VPN

High-throughput IPsec, L2TP VPN capabilities, reinforced with advanced SHA-2 encryption.

Anti-Virus

Integrate industry-leading gateway antivirus with Fast stream-based scanning providing real-time protection with no file size limitation.

Content Filtering

Cloud-based database of over 140 billion URLs that are continuously analysed and tracked within the Firewall, for both HTTP and HTTPS.

Layer 7 Application Intelligence

Identify, categorize and control over 3,000 applications and behaviours. You are also able to Traffic shape & prioritise services & applications via object-based policies.

Geo Enforcer (GeoIP)

Using integration with a global network you are able to build up security rules around locations of IPs based on their Geo Location of IP and Reputation.

Sandbox & Machine Learning

Leveraging from Sandbox and AI technology we are able to identify new threats never seen before and defending against them.

Botnet & Malware Blocker

When an unknown file appears, within seconds, Cloud Query quickly checks the file ID in Zyxel Security Cloud's database to check if it's malicious.

Intrusion Prevention

Intrusion prevention works by actively scanning forwarded network traffic for malicious activities and known attack patterns.

Reputation Filter

Reputation Filter matches up IP addresses with a real-time cloud database that tracks malicious cyber activities and determines if its address is reputable or not.

Integrated Wi-Fi Controller (Managed AP Service)

Use the Security Gateway as an On-Premise Wireless LAN Controller. Auto deploy and Manage Zyxel Managed Access Points (APs) from the Security Gateways User Interface (UI)

Hotspot Management

This feature allows you to add functionality including the support of tiered billing profiles for time based and bandwidth based accessibility for clients. Additionally supports Zyxel's Programmable ticket printer (SP350E).

ADD-ON

Link Aggregation Group (LAG)

Supporting active / backup, balance-alb and 802.3ad (LACP) LAG groups you can team ports to give higher link availability and increased link capacity.

NOW FREE

High Availability (HA) Pro

Next generation Device HA provides a fully redundant system running in an active / passive mode giving you a seamless failover process.

SSL Packet Inspection

Allows deeper policy enforcement by enabling the gateways application intelligence, IDP, content filtering and anti-virus traffic allow SSL encrypted connections to be inspected.

Radius & AD integration

Authenticate and create policy objects based on users and groups.

NEW

Introducing Express Mode

Express mode has been designed to **significantly improve performance by 2x** (at least) over traditional Stream Based UTM. This is achieved by leveraging from AI and evolving threat intelligence from the cloud.

	USG (Legacy)	USGFLEX	ATP
Express Mode (Cloud Query)	●	●	●
Deep Scan Mode (Stream Mode)	●	●	●
Hybrid Mode (Cloud + Stream)			●

Express Mode: Detailed Overview

	Method	USG (Legacy)	USGFLEX	ATP	Advantages	Disadvantages
Express Mode (Cloud Query)	Hash-matching over the cloud	●	●	●	<ul style="list-style-type: none"> Over 2x performance increase (UTM) Threat intelligence will evolve from AI World leading detection rate 	<ul style="list-style-type: none"> Won't work in isolated environment (requires internet) Mutant Malware may be skipped Initially.
Deep Scan Mode (Stream Mode)	Signature-matching by Hardware engines on device	●	●	●	<ul style="list-style-type: none"> Supports offline protection Better for fresh mutant malware detection 	<ul style="list-style-type: none"> Throughput limited by hardware No. of Signatures limited by hardware
Hybrid Mode (Cloud + Stream)	Concurrent Both Hash- matching and Signature based matching			●	<ul style="list-style-type: none"> Best Level of Protection 	<ul style="list-style-type: none"> Higher Cost

● Nebula Availability via Firmware upgrade Q1 2021 for USGFLEX Series (ZLD5) and H2 2021 for ATP Series

○ Optional via additional license

* Standard only (Premium is not supported on this series)

All device must be on latest firmware to release the features

Wireless Controller

Built-in Fully functional and comprehensive on-premise Wireless Access Point (AP) Controller for Supported Zyxel APs.

SDWAN

Supporting Advanced SD-WAN features like:
Auto-VPN, Dynamic Path Selection and WAN Optimization.**

Content Filtering

Strengthen security by blocking access to malicious or risky websites. Prevents malware downloads from compromised or hacked websites.

Device HA

VPN100/300/1000 includes Device High Available Pro as standard (Active / Passive).

Flexibility.

USG FLEX
Series

High Performance

USGFLEX Series is built on high performance hardware achieving up to 500% better throughput that of the USG series on UTM.

Enhanced UTM

USG FLEX series has enhanced traditional UTM. Including access to CTIRU* (Counter Terrorism Internet Referral Unit) Filtering.

Flexible Management

Ability to manage in standalone or via the Nebula Control Centre.*

Wireless Controller

Built-in Fully functional and comprehensive on-premise Wireless Access Point (AP) Controller for Supported Zyxel APs.

Device HA

USGFLEX includes Device High Available Pro as standard (Active / Passive)*.

Wireless Controller

Built-in Fully functional and comprehensive on-premise Wireless Access Point (AP) Controller for Supported Zyxel APs.

Device HA

ATP500/700/800 includes Device High Available Pro as standard (Active/Passive).

Sandbox

Leveraging from Sandbox and AI technology the ATP series is able to identify new threats never seen before and defending against them.

Enhanced UTM

ATP series has enhanced traditional UTM.

URL Threat Filter

ATP includes URL Threat Filter (formally called botnet filter) to protect against devices that are infected from calling home to a Command & Control Server (C&C)

ZYXEL
NETWORKS

Ultimate.

Introducing ATP Series

Wireless Controller

Built-in Fully functional and comprehensive on-premise Wireless Access Point (AP) Controller for Supported Zyxel APs.

Device HA

ATP500/700/800 includes Device High Available Pro as standard (Active/Passive).

Sandbox

Leveraging from Sandbox and AI technology the ATP series is able to identify new threats never seen before and defending against them.

Enhanced UTM

ATP series has enhanced traditional UTM.

URL Threat Filter

ATP includes URL Threat Filter (formally called botnet filter) to protect against devices that are infected from calling home to a Command & Control Server (C&C)

Going beyond the conventional.

Conventional techniques used in Unified Threat Management (UTM) provide an essential barrier of protection but rely on identifying known indicators of attack through signatures, heuristics or reputation methods.

Advanced Threat Prevention (ATP) goes beyond these methods by building on top of conventional techniques to provide protection against more sophisticated zero-day threats.

Conventional (UTM)

Threats are known, patched and added to signatures, heuristics or reputation methods

"Unknown" Security Threats / Zero-day Threats

Can't be identify by conventional UTM
ATP uses Sandboxing and AI to manage

Conquer unknown security threats.

Zero-Day Threats are much more sophisticated and are designed to be hidden / undetected by finding and exploiting security vulnerability in protocols or software.

This means they are unknown i.e. they are not included in signatures, heuristics or reputation databases.

ATP blocks suspicious traffic, whilst maintaining high throughput speeds to maintain positive user experience.

Unknown files are isolated using sandboxing technology for further analysis.

Smart cloud intelligence.

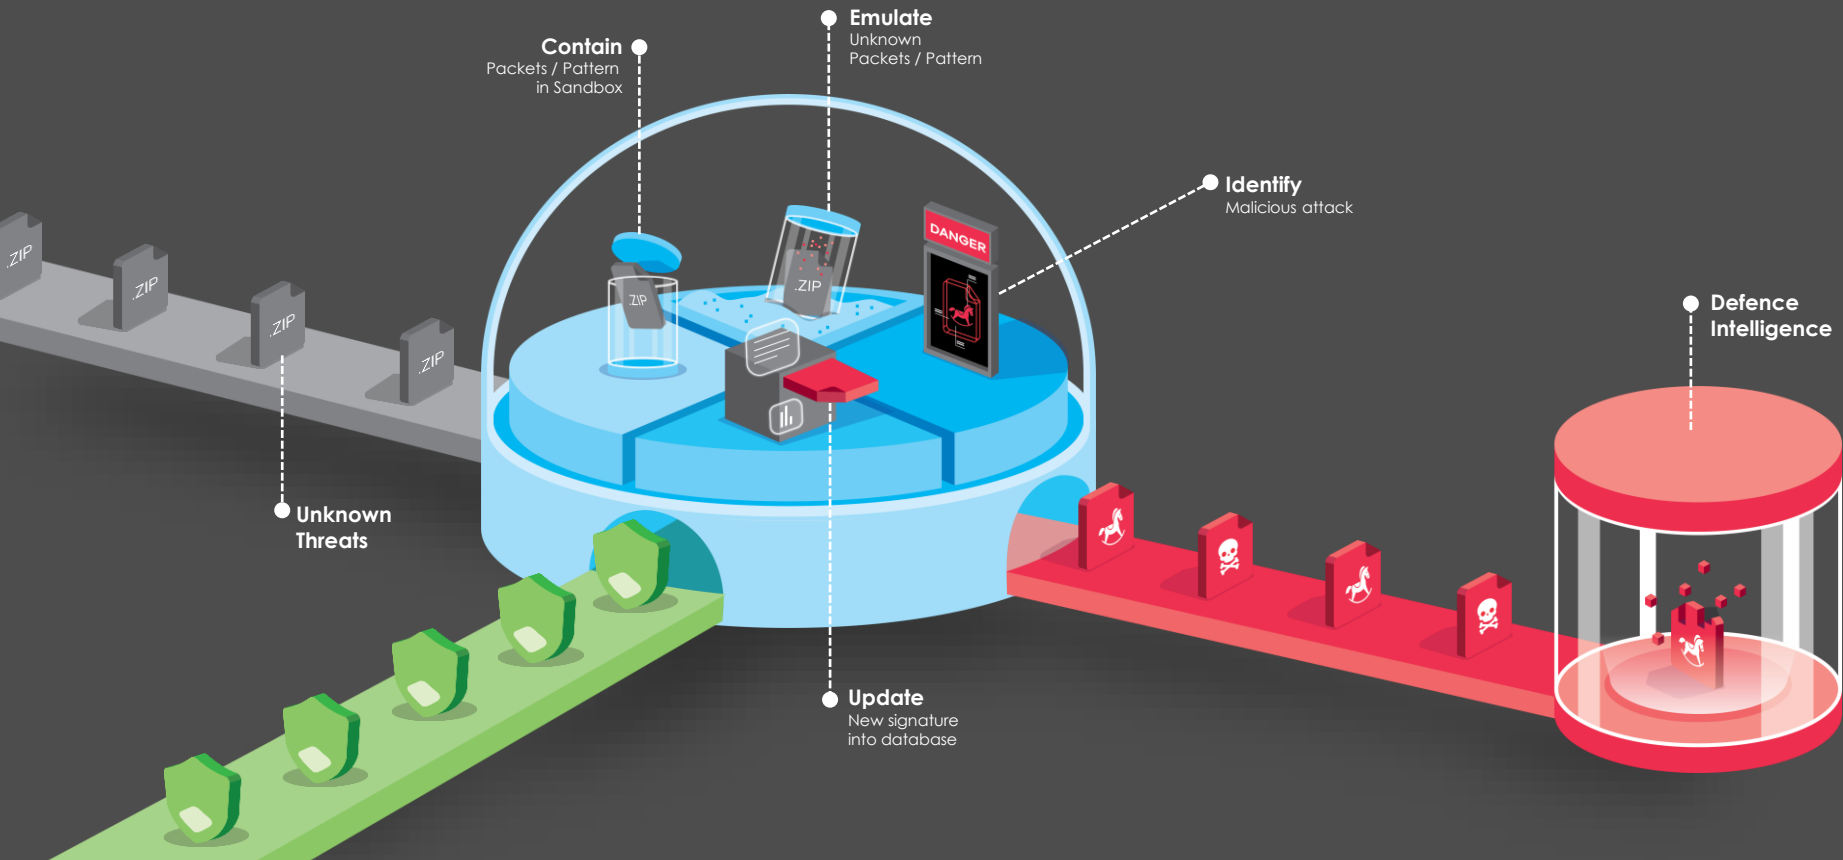

Cloud intelligence identifies incoming threats, and analyses them in real time to establish their safety, constantly updating the database for effective future threat identification.

ATP employs machine learning to evolve (AI) and grow stronger with each potential attack.

Conquer unknown security threats

through smart cloud intelligence.

Global security ecosystem.

With real-time cloud-and-device intelligence synchronization, each threat detected on an individual ATP gateway is extracted and shared via our cloud network.

This ensures that all ZyXel ATP firewalls globally are constantly updated, proactively assuring the ongoing security of all customers' network environments.

Industry Leading.

The ATP Product Line leverages from LastLine a market leader in "Security Effectiveness" against Breach Detection Rates and Reliability for Sandbox Solutions for Enterprises.

Gain better network Security insights

With SecuReporter

**MONITORING &
REPORTING.**

Creating smarter, more effective protection
methods for businesses to protect their networks.

What is SecuReporter.

Centralize your reporting for traditional Zyxel on premise security appliances.

Gain a clearer picture of what is happening on your security devices with our comprehensive reporting, alerting and visualization tools.

SecuReporter leverages from the cloud to create a simple but comprehensive portal that has been designed to help your business.

Input

- Log data
- Application Data
- Security Data

Analytics

- Time Normalization
- Data Extraction & Correlation
- Visualization & Search

SecuReporter

Dashboard

Reports

Alerts

Who, what and when?

Who, what and when should be an easy question to answer but often it is too difficult and time consuming especially for SB and SMBs to actually get to this information.

SecuReporter allows you to easily drill into data and analyze what has happened and quickly get to the information you need.

What kind of threat ?

Who is the target?

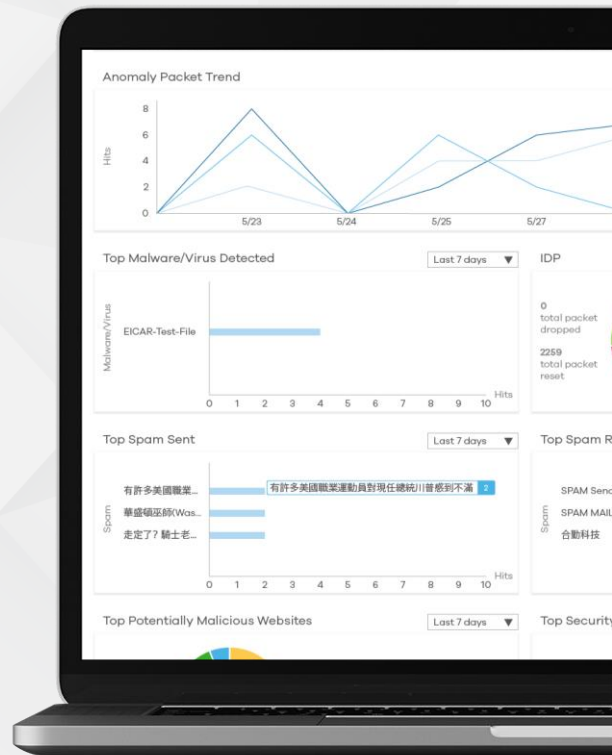

when?

Who is the attacker?

Where is the attack from?

Become user Aware.

SecuReporter helps IT managers and security managers spot risky users. Quickly view in-depth analysis on all events and traffic by identified users that have potential risk or display abnormal behaviour.

Manage all your clients in one place!

SecuReporter has been designed to cater for both individual users as well as Resellers and MSPs.

- Multi-Tenant support from a single cloud platform
- Centralized visibility and potential threat
- Scalable solution
- Custom analytics for each customer
- Customize alerts

Customize your Reports.

Easily create and customized reports with your own branding.

Schedule the reports to go to clients or managers.

Helping to achieve GDPR compliance.

Ability to remove personal information from the reports inline with your policies to help you and our clients comply with GDPR.

Non Anonymous

Personal data is clearly identifiable in Analyzer, Reports, and downloaded Archive logs.

Partially Anonymous

Personal data is replaced with artificial identifiers in downloaded Archive logs.

Fully Anonymous

Personal data is replaced with anonymized information in downloaded Archive logs.
